QUARTERLY MARKET REVIEW: APRIL – JUNE 2018

Dear Clients:

Last year was a uniquely good year for equities, both here and abroad. So far this year we've seen a great deal of Headline Risk create both uncertainty and volatility, as well as somewhat paltry returns in the markets. However, for the second half of the year, with global growth trending to 4% and global earnings trending to double digits, as well as earnings continuing to improve here domestically, we see the potential for a return to fundamentals and (hopefully) the accompanying *normalcy* that typically follows. As a result, we still firmly believe in a globally diversified portfolio - made up of stocks, bonds & alternatives - and have therefore further rebalanced your portfolio in that fashion.

The Markets (as of market close June 29, 2018)

The second quarter of the year can be called a lot of things, but boring isn't one of them. The potential for a trade war between the United States and China heated up in April as China responded to the threat of U.S. tariffs on Chinese imports by warning of the same magnitude of tariffs on American exports. Favorable corporate earnings reports helped calm some of the global economic angst investors may have felt. The indexes listed here ended the month ahead of their March closing values — but only barely. The Global Dow (1.16%) and the Russell 2000 (0.81%) posted the largest monthly gains, followed by marginal upticks in the S&P 500 (0.27%), the Dow (0.25%), and the Nasdaq (0.04%).

Despite expanding trade tensions between the United States, China, Canada, Mexico, and the European Union, equities enjoyed a better month in May, riding surging energy stocks. For most of the month, oil prices hit multi-year highs before falling at the end of May. Robust first-quarter earnings reports also helped push stock markets higher. In fact, each of the indexes listed here posted strong end-of-month gains.

The small caps of the Russell 2000 (5.95%) and the tech-heavy Nasdaq (5.32%) enjoyed the largest gains, followed by the S&P 500 (2.16%) and the Dow (1.05%). Of the indexes in this report, only the Global Dow lost value, falling 1.95% by the end of May.

A strong jobs report kicked off the month of June on a mostly positive note. Stocks closed the first full week of June higher, led by the large caps of the S&P 500 and the Dow. However, by the middle of the month, investors were hit with China's threat of increased tariffs on U.S. exports, while Canada pledged to impose retaliatory penalties as well. By the end of the month, the Dow and Global Dow lost some value, while the remaining indexes listed here posted marginal gains.

Overall, the second quarter saw the tech-heavy Nasdaq gain over 6.0%, only to be bested by small caps of the Russell 2000, which grew by almost 7.5%. The S&P 500 also closed the quarter ahead of its first-quarter closing values. The Dow didn't fare as well, finishing the quarter up by less than 1.0%. Prices for 10-year Treasuries rose by the end of the quarter, pulling yields down by 13 basis points.

Crude oil prices closed the quarter at about \$74.25 per barrel by the end of June, almost \$10 per barrel higher than prices at the close of the first quarter. Gold closed the quarter at roughly \$1,254.20, noticeably lower than its \$1,329.60 price at the end of March. Regular gasoline, which was \$2.648 per gallon on March 26, climbed to \$2.833 on the 25th of June.

Market/Index	2017 Close	As of June 29	Month Change	Quarter Change	YTD Change
DJIA	24719.22	24271.41	-0.59%	0.70%	-1.81%
NASDAQ	6903.39	7510.30	0.92%	6.33%	8.79%
S&P 500	2673.61	2718.37	0.48%	2.93%	1.67%
Russell 2000	1535.51	1643.07	0.58%	7.43%	7.00%
Global Dow	3085.41	2979.52	-0.75%	-1.56%	-3.43%
Fed. Funds	1.25%-1.50%	1.75%-2.00%	25 bps	25 bps	50 bps
10-year Treasuries	2.41%	2.86%	0 bps	13 bps	45 bps

Chart reflects price changes, not total return. Because it does not include dividends or splits, it should not be used to benchmark performance of specific investments.

Last Month's Economic News

- **Employment:** Total employment rose by 223,000 in May after adding 164,000 new jobs in April. The average monthly gain over the prior 12 months is 191,000. Notable employment gains occurred in professional and technical services (23,000), retail trade (31,000), and health care (29,000). The unemployment rate slipped to 3.8%. The number of unemployed persons declined to 6.1 million. Over the year, the unemployment rate was down by 0.5 percentage point, and the number of unemployed persons declined by 772,000. The labor participation rate was little changed at 62.7% (62.9% in April). The employment-population ratio held at 60.4%. The average workweek was unchanged at 34.5 hours

for the month. Average hourly earnings increased by \$0.08 to \$26.92. Over the last 12 months, average hourly earnings have risen \$0.71, or 2.7%.

- **FOMC/interest rates:** The Federal Open Market Committee raised the federal funds target range rate for the second time this year, bumping the range up by 25 basis points following the Committee's June meeting. The target range now sits at 1.75%-2.00%. The Committee cited continued strengthening in the labor market and increased household spending as justifications for the rate hike. Also of note, the Committee forecasts the median funds rate at 2.4% by year's end instead of 2.1% as forecasted in March. This means two more rate hikes could be in the offing before the end of the year.

- **GDP/budget:** The third and final estimate of the first-quarter gross domestic product showed the economy expanded at an annual rate of 2.0%, according to the Bureau of Economic Analysis. The fourth-quarter GDP grew at an annualized rate of 2.9%. According to the report, consumer spending was rather subdued, expanding at a rate of only 0.9%. Corporate profits increased \$39.5 billion in the first quarter, in contrast to a decrease of \$1.1 billion in the fourth quarter. Fewer exports and more imports during the quarter contributed to slower economic growth. Spending on durable goods, which had increased 13.7% in the fourth quarter, dropped 2.1% in the first quarter. Gross domestic income rose 3.6% in the first quarter — far surpassing the 1.0% growth rate in the fourth quarter. The government budget deficit was \$146.8 billion in May following a surplus of \$214.3 billion in April. For fiscal 2018 through May, the federal deficit sits at \$532.2 billion — up by \$99.4 billion, or about 23%, from the deficit over the same period last year.

- **Inflation/consumer spending:** Consumer spending, as measured by personal consumption expenditures, jumped 0.2% in May, after increasing 0.5% in April. Core consumer spending (excluding food and energy) also rose 0.2% in May. Core consumer prices, a tracker of inflationary trends, increased 0.2% in May. But of more importance, core prices have increased 2.0% over the last 12 months — an annual rate that could prompt more interest rate increases during the remainder of 2018.

- The Consumer Price Index rose 0.2% in May, the same increase as in April. Over the last 12 months ended in May, consumer prices are up 2.8%. Core prices, which exclude food and energy, also climbed 0.2% for the month, and are up 2.2% for the year.

- Prices at the wholesale level expanded noticeably in May. The Producer Price Index showed the prices companies receive for goods and services jumped 0.5% after climbing 0.1% in April. Year-over-year, producer prices have increased 3.1%. Prices less food and energy increased 0.3% for May and are up 2.4% over the last 12 months.

• **Housing:** Sales of existing homes continued to slow in May. Total existing-home sales fell 0.4% for May following a 2.5% drop in April. Year-over-year, existing home sales are down 3.0%. The May median price for existing homes was \$264,800, which is 4.9% higher than the May 2017 price of \$252,500. While inventory for all types of existing homes for sale rose 2.8% in May, it is 6.1% lower than a year ago. New home sales, on the other hand, climbed 6.7% in May after falling 1.5% in April.

Falling home prices surely led to the spike in new home sales. The median sales price of new houses sold in May was \$313,000 (\$318,500 in April). The average sales price was \$368,500 (\$394,600 in April). Inventory fell slightly to 5.2 months, down from the 5.5-month supply in April.

• **Manufacturing:** Industrial production edged down 0.1% in May after increasing 0.9% in April. Nevertheless, total industrial production is 3.5% higher in May than it was a year earlier. Manufacturing production fell 0.7% in May, largely because truck assemblies were disrupted by a major fire at a parts supplier. Excluding motor vehicles and parts, factory output moved down 0.2%. The index for mining rose 1.8%, its fourth consecutive month of growth; the output of utilities moved up 1.1%. New orders for manufactured durable goods climbed 0.6% in May following two consecutive monthly decreases.

• **Imports and exports:** The advance report on international trade in goods revealed that the trade gap decreased by \$2.5 billion in May from April. The deficit for May was \$64.8 billion (the April deficit was \$67.3 billion). May exports of goods jumped 2.1%, while imports increased 0.2%. On a seasonally adjusted basis, May's total imports (\$208,405 billion) far exceeded exports (\$143,560 billion). Both higher; both increased 0.6% in May after climbing 0.3% and 0.6%, respectively, in April. Over the last 12 months, import prices have increased 4.3% and export prices are up 4.9%.

• **International markets:** Investors, both at home and abroad, may be concerned that the escalating trade dispute between the United States and several other important trade partners may stunt global economic growth. Despite the negative trade rhetoric, China's economy expanded at a rate of 6.8% in the first quarter, much to the surprise of some investors and economic analysts.

On the other hand, potential trade tariffs may have impacted Europe's largest economy. Germany's gross domestic product stalled in the first quarter, growing at a subdued rate of 1.2% after expanding 2.5% in the fourth quarter. Overall, the eurozone GDP also decelerated to a growth rate of 1.7% in the first quarter, down from the 2.7% rate of growth in the fourth quarter.

• **Consumer confidence:** Consumer confidence, as measured by The Conference Board Consumer Confidence Index®, dipped 2.4% in June following an increase in May. According to the report, consumers' confidence in the present economic conditions remained relatively the same as in May, but expectations for future growth were tempered. This reading may be reflective of the imposition of tariffs and the ongoing trade war.

As we said above, we believe there is slowly, gradually a return in the U.S. economic markets to *normalcy* – in interest rates, and the expected returns of stocks, bonds and cash. As a result, this quarter we made several strategic changes, either adding or eliminating several positions within our Model Portfolios that would have impacted the make-up and diversification of your accounts.

We did this to react to the rising potential of a trade war, and the threat of US tariffs; to continue to incorporate income producing investments in the portfolio within a rising rate environment, generally difficult for traditional bonds, and to continue to include the likes of Private Equity and other Alternative Investments (such as emerging markets, later stage venture capital, and diversified hedge funds), which are generally uncorrelated to the traditional equity markets and may provide bolstered returns during market instability.

As a result, we continue to seek reasonable risk adjusted returns within your portfolio during a challenging year in which the overall Bond & International markets are negative year to date, and the S&P 500 is simply +1.67% as of the end of the second quarter.

We hope that you are enjoying your summer and that the markets heat up as the weather cools down, in order to provide another year of responsible growth within your household assets. As always, we are here to talk further about this and to answer any question or concern you may have.

Warmest regards,
