ANNUAL MARKET REVIEW 2018

Dear Client,

We hope this finds you and yours well and enjoying a great and calmer start to the New Year.

2018 was a very eventful and volatile year for both U.S. and International markets, both on the stock and bond side. The Equity markets tested highs and lows three times throughout the year, in many respects going unnoticed until the 4th quarter. During the 4th quarter, especially in late December, the broader U.S. and International Equity market indices fell considerably due to concern surrounding U.S. central bank interest rates, sharp slowdown in the eurozone, weaker Chinese growth and trade concerns, rising geo political concerns, mid-term elections, U.S. government shutdowns, Brexit, and an overriding volatility in the tech sector.

However, despite a challenging year in late 2018, we continue to believe that moderate economic and earnings growth should favor risk-based assets, while we expect periodic episodes of volatility in both the Stock and Bond markets. In addition, we continue to be highly aware of the issues surrounding the rise in interest rates, U.S. and global politics, Brexit, and the continued China trade concerns. With all this being said, the fundamental base of the US economy remains strong and the global economy remains in expansion. This doesn't mean that there will be a lack of volatility, in fact, we may have increased volatility, but we've prepared your portfolio as best we can for this and will absolutely react accordingly on your behalf.

Overview

Trade wars, midterm elections, and market volatility highlighted 2018 for investors. In an attempt to reduce the trade deficit, President Trump pushed to rewrite trade agreements with several long-time trade partners of the United States. Trump amended the trade agreement with South Korea, imposed tariffs on steel and aluminum, and renegotiated the North American Free Trade Agreement (now called the United States-Mexico-Canada Agreement). But the trade war with China has been the most compelling and impactful, not only to the countries directly involved, but to much of the global economy. Reciprocal tariffs were imposed by each economic giant throughout the year. There was a temporary truce achieved following the Group of 20 summit, but there was no definitive agreement reached.

Elections in November showed how politically divided the nation is. Democrats picked up 40 congressional seats to win control of the House of Representatives for the first time since 2011. On the other hand, Republicans maintained control of the Senate. The end result is a Congress that has become more divided, at least politically. Oh, and the federal government shut down in late December due to a budgetary stalemate between President Trump and Congress, principally over funding for a border wall.

For the year, the stock market reached new highs and gave it all back by the end of December. "Volatility" is the word that best describes the market in 2018. Despite the economy expanding at a rate not seen in many years, favorable corporate earnings reports, strong consumer spending, tepid inflation, and plenty of jobs to be had, stocks floundered. Trade wars continued, the Federal Reserve hiked interest rates, oil prices bottomed out, and long-term bond prices rose. The Chicago Board Options Exchange (CBOE) Volatility Index (VIX), which provides a measure of market risk and investors' sentiments, spiked in February, then was relatively stable through much of the summer.

However, by the end of December, the VIX jumped again. Stocks were sold, bought, and sold again in rapid order, causing benchmark indexes to post noteworthy gains and losses on an almost daily basis. As a result, investors rode a roller coaster of stock prices throughout the year.

The year saw some positive highlights as well. The economy expanded at an annual rate exceeding 3.0% for the first time in several years. The unemployment rate hit the lowest mark since 1969. In November, 1.7 million persons were marginally attached to the labor force, an increase of 197,000 from a year earlier. The Federal Reserve, based on the strength of the economy and labor market, raised interest rates four times during the year. Consumer income rose and purchases increased, and inflation exceeded 2.0% midyear, only to fall back below that target by the end of 2018.

The third quarter proved to be very strong for domestic stocks. July saw the major benchmark indexes listed here enjoy robust gains, led by the large caps of the Dow and S&P 500. Global stocks also rebounded in July, with the Global Dow surging 3.76% by the end of July. Favorable economic indicators and encouraging corporate earnings reports were enough to quell investor concerns over the continuing saga that is the back-and-forth trade tariffs between the United States and China.

Market/Index	2017 Close	As of 9/28	2018 Close	Month Change	Q 4 Change	2018 Change
DJIA	24719.22	26458.31	23327.46	-8.66%	- 11.83%	-5.63%
NASDAQ	6903.39	8046.35	6635.28	-9.48%	-17.54%	-3.88%
S&P 500	2673.61	2913.98	2506.85	-9.18%	-13.97%	-6.24%
Russell 2000	1535.51	1696.57	1348.56	-12.05%	-20.51%	-12.18%
Global Dow	3085.41	3121.54	2736.74	-6.81%	-12.33%	-11.30%
Fed. Funds	1.25%-1.50%	2.00%-2.25%	2.25%-2.50%	25 bps	25 bps	100 bps
10-yr Treasuries	2.41%	3.06%	2.68	-31 bps	-38 bps	27 bps

Chart reflects price changes, not total return. Because it does not include dividends or splits, it should not be used to benchmark performance of specific investments.

Snapshot 2018

The Markets

- **Equities:** The year 2018 may ultimately mark the end of what was nearly a 10-year bull run. At the start of the year, January was a good month; February and March were not. However, as spring approached, growth in equities began to pick up steam, leading to record highs in several of the benchmark indexes during the summer months. But by October, volatility began to increase, as investor concerns about the impact of a trade war between the world's largest economies was enough to prompt sell-offs, sending stock prices lower. November was a little better, but December proved to be tumultuous. Ultimately, the benchmark indexes listed here could not match their 2017 year-end values. In fact, several of the benchmark indexes suffered their worst annual losses in many years.

  Each of the benchmark indexes listed above fell well below their respective 2017 year-end closing values. Compared to 2017, the Russell 2000, which had eclipsed its 2017 closing mark by over 13% in September, ended the year down over 12%. The Global Dow was not far behind, falling more than 11% by the end of December. The large caps of the Dow and S&P 500 ended the year down 5.6% and 6.2%, respectively. The Nasdaq, which led the way for much of the year on the strength of tech stocks, gave all of the gains back, dropping almost 4% below where it started the year.

- **Bonds:** As stock prices soared during the first half of 2018 and interest rates moved incrementally higher, the demand for long-term bonds was marginal. Yields on 10-year Treasuries rose almost 30 basis points in January as bond prices fell. Long-term bond yields continued to climb, reaching 3.0% in July. However, as volatility increased for stocks, the yield on long-term bonds began to fall as demand drove prices higher. Ultimately, the yield on the benchmark 10-year Treasuries closed 2018 at 2.68%, up from the 2017 closing yield of 2.41%.

- **Oil:** Oil prices began 2018 at over $60 per barrel and continued pushing higher through January, reaching almost $70 per barrel in May. Oil prices remained in the $60 range for most of the fall, spiking to almost $76 in early October. But fears of overproduction began pushing oil prices lower in November. Prices continued to fall, hitting a low of nearly $42 per barrel in mid-December. Ultimately, oil prices closed 2018 at $45.81 per barrel —

their first annual loss since 2015. As oil prices rose and fell, so did prices at the pump. Retail regular gasoline prices closed the year around $2.321 per gallon on December 24, about $0.151 less than a year ago.

- **FOMC/interest rates:** The Federal Open Market Committee raised interest rates four times during 2018. Each time the target range increased by 25 basis points. The first increase occurred in March, followed by a rate increase in June, an increase in September, and a final bump occurring in December. For the year, the target range has increased 100 basis points, from 1.25%-1.50% to 2.25%-2.50%. Following each rate increase, the Committee expressed the expectation that the labor market would remain strong and the economy would continue to expand, while noting that private business investment had slowed. The Committee changed its stance by the end of the year and reduced its forecasts from four rate increases in 2019 to two 25-basis-point rate increases in 2019.

- **Currencies:** The dollar maintained a relatively strong position throughout much of 2018. The Wall Street Journal Dollar Index, which measures the U.S. dollar against the currencies of 16 other countries, closed 2018 at $89.67, up from its 2017 year-end mark of $85.98. Another currency index, the ICE U.S. Dollar Index, which measures the dollar relative to a basket of six foreign currencies, closed 2018 about 4.5% higher — its best annual gain in several years.

- **Gold:** Through the first quarter of 2018, gold hovered around $1,350 a troy ounce. Rising interest rates, favorable stock market returns, and a strong dollar helped to push gold prices lower during the summer months. However, as stock prices faltered, gold prices pushed closer to their early-year values, finally closing 2018 at $1,284.70.

The Economy (through November 2018)

- **Employment:** The U.S. labor market was solid throughout 2018. Employment growth averaged 209,000 new jobs per month in 2018, compared with an average monthly increase of 174,000 new jobs in 2017. The unemployment rate ended the year (as of November 2018) at 3.7% — lower than the 4.1% rate at the close of 2017. Over the year, the unemployment rate and the number of unemployed persons declined by 0.4 percentage point and 641,000, respectively. According to the Bureau of Labor Statistics, there were 6.0 million unemployed persons in November 2018, down from 6.6 million unemployed in November 2017. The labor force participation rate was 62.9% in 2018, up slightly from last year's rate of 62.7%. The employment to population ratio was 60.6% (slightly better than 60.1% in 2017). In 2018, the average workweek was 34.4 hours (34.5 hours in 2017). Average hourly earnings in 2018 were $27.35, an increase of 3.0%, or $0.80, over $26.55 in 2017.

- **GDP/budget:** Economic growth, as measured by the gross domestic product, expanded throughout the year, increasing at an annual rate of 3.4% in the third quarter of 2018. The first-quarter GDP rose 2.2%, followed by a 4.2% gain in the second quarter. Gross domestic product essentially measures what the economy produces, such as goods and services. On the other hand, gross domestic income measures all income earned from the production of goods and services, such as wages, profits, and taxes. GDI rose 4.3% in the third quarter of 2018, compared to a 1.3% increase in the third quarter of 2017. The average of gross domestic product and gross domestic income, a supplemental measure of U.S. economic activity that equally weights GDP and GDI, increased 3.8% in the third quarter, compared with an average annual increase of 1.9% in 2017. The federal deficit was roughly $779 billion for fiscal year 2018, an increase of $113 billion over the 2017 fiscal year deficit of $666 billion. The government fiscal year runs from October through September.

- **Inflation/consumer spending:** Inflation, as it relates to consumers, had reached the Federal Reserve's stated target rate of 2.0%, only to fall below that level in November. The personal consumption expenditures (PCE) price index, the measure of the increase in the prices of goods and services purchased by consumers, was 1.8% higher in November 2018 compared to November 2017. Core PCE, which excludes the volatile food and energy components, expanded at an annual rate of 1.9% in 2018. Personal (pre-tax) income increased 4.1% in the third quarter of 2018 compared to an annual rate of 4.4% in 2017. After-tax income (disposable personal income) increased 4.0% in the third quarter of 2018 after expanding at an annual rate of 4.4% in 2017. Another measure of inflation, the Consumer Price Index, measures the price level of a basket of consumer goods and services purchased by individuals. Over the 12 months ended November 2018, the CPI rose 2.2% (2.1% in 2017).

- **Housing:** A lack of inventory, coupled with rising mortgage interest rates, contributed to a rather lackluster performance in the housing sector. Through November, existing home sales are down 7.0% from a year ago. The November annual sales rate of 5.32 million was notably lower than the 5.72 million rate for November 2017. The median existing-home price for all housing types in November was $257,700, up 4.2% from November 2017 ($247,200). November's price increase marks the 81st consecutive month of year-over-year gains. Total inventory of existing homes for sale in November was 1.74 million — 4.2% greater than last November (1.67 million).

- **Manufacturing:** Manufacturing and industrial production performed better in 2018 than the prior year. The Federal Reserve's index of industrial production revealed that total industrial production rose 3.9% over the 12 months ended in November 2018. Over the same period, the output of consumer goods increased 1.5% and production of business equipment expanded 4.1%. Capacity utilization for manufacturing increased 2.0% over

the past year. New orders for manufactured durable goods (expected to last at least three years) increased by 8.4% from 2017. Shipments were up 7.2%. Capital goods — tangible assets used by manufacturers to produce consumer goods — also expanded in 2018. New orders for capital goods increased by 8.5%, and shipments of capital goods expanded by 7.3%.

- **Imports and exports:** From January through October, the international trade deficit for goods and services was $503 billion, or 11.5% greater than the deficit over the same period in 2017. The goods deficit totaled $729 billion, while services had a surplus of $226 billion. Exports increased from $1.944 billion in 2017 to $2.093 billion. Imports increased from $2.400 billion to $2.600 billion. Import prices increased 0.7% over the past 12 months ended in November. Export prices expanded by 1.8% over the 12 months ended November 2018.

- **International markets:** International equities did not enjoy the same upward momentum in 2018 compared to the prior year. Economic expansion stalled for many international economies as heightened trade tensions between the United States and several of its trade partners and tighter monetary policies cast a shadow over economic expansion. Following demands for more favorable trade terms, the United States imposed tariffs on imports from several of its trade partners. While negotiations ultimately resolved trade wars with some countries, notably Mexico and Canada, a major impasse still exists between the United States and China. The impact on both countries has been palpable, particularly in China, where fixed-asset investment, retail sales, and industrial output have each decreased in 2018 compared to 2017. In Europe, Great Britain is scheduled to leave the European Union soon, yet it remains unclear under what terms Brexit will take place. Also, several countries tightened their respective monetary policies in 2018 on the heels of economic growth in 2017. The lower interest rates in 2017 that helped propel consumer spending and business investment began to rise in 2018, hindering equity and economic expansion.

Eye on the Year Ahead

As you've seen, the U.S. economy grew at a respectable rate in 2018; but will it continue along the same path in 2019? We don't know, and fears of an economic slowdown lingered at the end of last year and may be realized in 2019. This can be seen in both the the US housing and technology markets. Housing hasn't picked up the pace of previous years and is generally lagging behind other economic mainstreams. Also, with inflation inching ahead, economic stimulus may be easing, which could lead to tighter financial conditions moving ahead. At the same time, the tech sector is having a more direct impact on the indices in relation to other sectors, as tech companies are listed on both the Dow and S&P. As a result, we are seeing these indices oscillate as a result of tech companies' performance, rather than in relation to the broader indices in general.

This all proved to be too much for investors to digest and we saw the 200-day moving average broken, with the headlines reporting more negative than positive news. In an environment we have not seen for almost 9 years, this set panic into motion for safety. The flight to safety is not always the best option because when such volatility spreads across the broader markets, it affects all asset classes. The resulting effect is to move from one volatile asset class to another, escaping nothing.

It is worth noting that it is extremely healthy for markets to have volatility. We realize that volatility creates an insecurity that does not feel good on any level. Additionally, we feel that the resulting stress is more heightened because we have not seen volatility like this in years. At times like this it is important to remember that volatility is a normal part of investing and to know that we continue to do our best to maintain the appropriate diversification of your investment

As always, thank you for your continued support and confidence in our stewardship of your assets.

Warmest regards,
